

LAWDGER.AI LANDING PAGE

Phase 1: Ambient Depth & Background Layering

CONTEXT FOR ANTIGRAVITY

You are working on the dark-mode hero section of the Lawdger.ai landing page. The current page has a flat, warm olive-black background (~#0D0D00 family) with a faint warm grain overlay. Your task in this phase is **background system surgery only** — do not touch any text, layout, components, or interactive elements. We are replacing the entire ambient background system with a deep, cinematic navy environment.

TARGET PALETTE (strict — no deviation)

Color Name	Hex Code	Usage
Background Base	#0A0D1A	Near-black tinted navy — the true dark anchor
Ambient Glow Color	#1A237E	Deep Navy — used in radial light source only
Accent Reserved	#00BFA5	Electric Teal — NOT used in this phase
Border/Muted	#455A64	Slate Gray — NOT used in this phase

TASK 1 — Replace Background Base Color

Replace the current warm olive-black background color of `<body>` and the hero section root container with **#0A0D1A**. This is a near-black with a cold, desaturated navy undertone — it must read as black at a glance but reveal depth under the gradient layer.

- Target: `body`, `.hero`, `.hero-section`, or whatever the root full-viewport container is.
- Set: `background-color: #0A0D1A;`
- Remove any existing background-color with warm/olive tones on these elements.

TASK 2 — Implement Radial Ambient Gradient

On the same root hero container, layer a **radial gradient** over the base color using a CSS multi-background stack. The gradient must simulate a distant, diffused light source — like a projector aimed from the upper-right corner of the room.

```
background:
  radial-gradient(
    ellipse 80% 60% at 72% 18%,
    rgba(26, 35, 126, 0.55) 0%,
    rgba(10, 13, 26, 0.0) 70%
  ),
  #0A0D1A;
```

Specification notes:

- The gradient origin point 72% 18% places the light source at the upper-right area — roughly behind and above the phone mockup.
- Opacity 0.55 at center ensures it reads as ambient atmosphere, NOT a colored spotlight. If it reads as a bright blue blob, reduce to 0.40.
- The gradient must fade fully to transparent by 70% — the left edge of the screen (where the headline lives) must remain in near-black shadow with zero blue bleed.
- Do not use background-image alone — use the full background shorthand to stack with the base color.

TASK 3 — Noise/Grain Texture Overlay

Add a full-viewport grain layer using an **SVG-based noise filter** rendered as a pseudo-element. This gives the background a tactile, matte-paper or brushed-metal quality — the hallmark of premium dark UI (Linear, Vercel, Arc).

Implementation — add this CSS block:

```
.hero::before { content: ''; position: absolute; inset: 0; pointer-events: none; z-index: 0;
opacity: 0.035; background-image: url("data:image/svg+xml,%3Csvg viewBox='0 0 256 256'
xmlns='http://www.w3.org/2000/svg'%3E%3Cfilter id='noise'%3E %3CfeTurbulence
type='fractalNoise' baseFrequency='0.9' numOctaves='4' stitchTiles='stitch'/%3E%3C/filter%3E
%3Crect width='100%25' height='100%25' filter='url(%23noise)'/%3E %3C/svg%3E");
background-repeat: repeat; background-size: 180px 180px; }
```

Specification notes:

- *opacity: 0.035 is the target. It should be **felt, not seen** — if you can consciously notice it without squinting, reduce to 0.025.*
- *baseFrequency: 0.9 produces fine grain (not chunky). Do not lower this value — lower values create a mud/fog look.*
- *background-size: 180px 180px tiles the grain at a scale that reads natural on both Retina and standard displays.*
- *The hero container must have position: relative for the pseudo-element to anchor correctly. Add this if missing.*
- *Ensure all hero child content (navbar, headline, mockup) has position: relative; z-index: 1 or higher to sit above the grain overlay.*

TASK 4 — Extend Background System to Full Page

The background environment must not end at the hero boundary. Apply the same #0A0D1A base to body so scroll overflow, footer sections, and any below-fold content all exist within the same dark universe. The radial gradient is **hero-only** (it's a hero atmospheric effect, not a page-wide one), but the base color is global.

```
body {
  background-color: #0A0D1A;
}
```

WHAT NOT TO TOUCH IN THIS PHASE

- **Do not change** any font color, size, weight, or family

- **Do not change** the navbar styling, CTA buttons, or overline badge
- **Do not change** the phone mockup border, internal UI, or waveforms
- **Do not add** any Electric Teal (#00BFA5) effects — those are Phase 4
- **Do not change** any layout, padding, margin, or z-index (except adding z-index: 1 to hero children as needed for the grain layer fix)

ACCEPTANCE CRITERIA — How to verify Phase 1 is complete

Check	Pass Condition
Background base	Reads as cold near-black. Zero warm/olive tones visible
Radial gradient	Visible as a soft navy atmospheric glow in the upper-right quadrant only
Gradient bleed	Left half of hero (headline area) is in clean near-black shadow
Grain texture	Visible on close inspection or when viewed at 50% brightness. Invisible at normal viewing distance
Text legibility	No headline or body copy has reduced contrast due to gradient bleed
Scroll overflow	Below-fold area matches the same dark base (no warm background bleed)

Confirm Phase 1 complete, then prompt for Phase 2 → **Typographical Refinement.**
